

## SAMURAI option: TCP/IP INTERFACE

### Field of Application:

This interface allows external programs to configure and operate SAMURAI and to receive measurement data from SAMURAI via the TCP/IP network protocol. In this way, SAMURAI becomes network-compatible.

### Description:

This option enables the remote control of SAMURAI by a client program via a network. The interface permits the transfer of commands, status messages and measurement data via the TCP/IP network protocol.

Because timestamps are included in the measurement data, client programs have the possibility to synchronize data from several measurement devices upon which SAMURAI is installed.

### Technical Data

Features	<ul style="list-style-type: none"><li>• Measurement data transfer via TCP/IP</li><li>• Description of the communications interface</li><li>• Access control via password allocation</li></ul>
